### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-17 and 19-21 are again rejected under 35 U.S.C. 102(b) as being anticipated by Neuhaus et al (patent no. 5255962).

Claim 1 as amended is essentially incorporating the limitations from either claim 7 or claim 8. Similarly, claim 14 as amended is essentially incorporating the limitations from the canceled claim 18. The remaining claims are essentially the same as originally presented. Hence, the reason for the rejection for claims 1-17 and 19-21 based upon the Neuhaus et al reference as set forth in the last office action is maintained and incorporated herein by reference.

3. In the amendment, applicant merely alleged that the claimed feature of employing at least one vehicle performance sensor to provide sensor signals to both the first and second distributed electronic units has not been disclosed in the Neuhaus et al reference. The examiner strongly disagrees with such allegation. Applicant's attention is again directed to item 22, figure 1 and column 6, lines 30-33 and 35-39 and column 8, lines 41-43 of the Neuhaus et al reference in which they collectively teach that the claimed at least one performance sensor is used to provide sensor signals to both the first distributed electronic control unit (item 1) and the second distributed electronic control unit (item 2). For the sake of argument, assuming that such alleged feature has not been explicitly disclosed in the Neuhaus et al reference, the Mies reference (patent no. 6209966) submitted by applicant in item 29 of figure 1 clearly discloses such feature

Art Unit: 3661

of providing the same sensor signals to both distributed electronic control units (items 25 and 26) is well known in the art. It is the examiner's contention that it would have been readily apparent for one skilled in the art to incorporate such well known feature as taught in Mies into the Neuhaus et al system to avoid the expense of using a second sensor providing that redundancy is not warranted.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
